# Public Service

Hey guys, just want to say a huge THANK YOU!!! It is very very frustrating on my end to not have communication to my guys when hosting an event. So this really helps us out as well as my guys out there knowing we do have that because of you guys coming out there. It gives me a little piece of mind and enables us to be prepared for the athletes when they arrive back at the venue and head out for the run.

So again THANK YOU and we look forward to working with you all in the future at Big Fish and TFL 2013.

### Happy Training & Good Health,

Kenny Krell Race Director Gaylord, Mi.

Thank you to all of these operators for supporting the Otter Lake Triathlon on July 15<sup>th</sup>.

KD8EBY, KB8TAR, WA8OGJ, KD8CIL, KD8LXW, KC8PMW, N8OSL, KD8HNX, KD8EOA Don't forget to join your fellow hams on the Tuesday night net at 8:00 pm on 146.620 - with 100 Hz PL

### NET CONTROL SCHEDULE

07 Aug - KB8TAR 14 Aug - no net 21 Aug - KD8EBY 28 Aug - KD8EOA 04 Sept - KB8TAR

#### A COM Port Too Far

I recently spoke with a ham who was frustrated with a piece of *Windows* software. He wanted to use the software to program his transceiver's memory channels, but the software setup menu needed to know which COM port it should use to communicate with the radio.

simi∎ min

Figure 1 – The list of active ports in Windows Device Manager, including a USB Serial Port.

· di Stere PC

Unfortunately, the software had been written back in the days when computers communicated with the outside world through a limited number of serial ports. Today, serial ports have gone the way of the dinosaurs and have been replaced by USB ports. Normally this isn't an issue. If you need a traditional serial connection,

you pick up a handy serial-to-USB adapter. When you plug in the adapter, *Windows* creates a *virtual* COM port through which the software can communicate. All is well ... or maybe not.

His particular piece of software used a drop-down menu to present the list of COM ports it would recognize. The list consisted of COM 1, COM 2, COM 3

and COM 4. The serial-to-USB adapter, however, was communicating through virtual COM port 11. My friend was out of luck (he used a stronger, unprintable term).

Fortunately, there is a solution.

The first step in the journey is to go to *Windows* Control Panel and find *Device Manager*. In Device Manager, hunt for the word *Ports* in the device list and click the little arrow beside it. See Figure 1 and you'll notice a USB Serial Port, which is already set to COM 2 because, as it turns out, I had a similar software issue on my station PC that I resolved in the same way. For now let's assume the USB Serial Port is COM 11 or something similar.

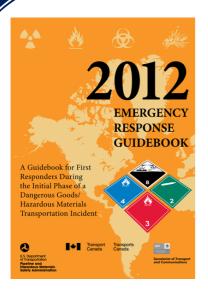

Figure 2 – By clicking on the *Advanced* button under Port Settings you can access the menu that allows you to change the COM port number.

Double click on the USB Serial Port and then click the *Port Settings* tab. A new window pops open and you'll see a button labeled *Advanced* (don't let that scare you). Click on *Advanced* and you'll be greeted with yet another window (Figure 2). In this window you'll find a drop-down menu that will allow you to renumber the port. If your software needs to "see" COM 4 and you don't see COM 4 elsewhere in the Device Manager Ports list, select COM 4 in the drop-down menu and then click OK (and keep clicking OK all the way back out to Device Manager).

What was once virtual port COM 11 is now virtual port COM 4. Select COM 4 in the software menu and you're all set. (And so was he.)

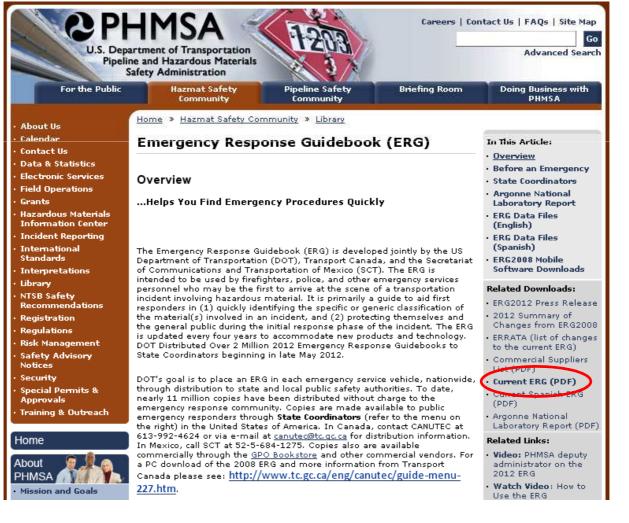

60 July 2012 ARRL, the national association for Amateur Radio® www.arrl.org

Just in case you missed it. This information was in a recent QST issue. This was exactly the information some of us packet guys needed earlier this year.

For those of you that are interested the new 2012 ERG book is available in pdf format at:
